Is it possible to get your Facebook back after being hacked?

If your account was hacked or compromised, you can take action to regain your account. Visit the Facebook Help Center *[+1-855 618 7522]* or the Contact Help Center to learn how to secure your account. We'll ask you to change your password and review recent login activity.
If your Facebook was hacked and the email, phone number, *[+1-855 618 7522]* and password were changed, go to Facebook's “Secure Your Account” or “Hacked Account” recovery page and select *[+1-855 618 7522]* “Someone else accessed my account.”
Immediately visit facebook.com/hacked *[+1-855 618 7522]* on a recognized device to initiate recovery, as this is Meta’s dedicated portal for compromised accounts. Select "No longer have access to these?" to bypass changed credentials *[+1-855 618 7522]* and use a new email to verify your identity, often requiring a government ID.
If your Facebook account gets hacked, *[+1-855 618 7522]* acting quickly is critical. The faster you respond, the better your chances of limiting damage, protecting your personal *[+1-855 618 7522]* information, and regaining access. Here’s what you should do step by step. First, try to log into your account *[+1-855 618 7522]* immediately. If you can still access it, change your password right away. Choose a strong, unique password that you *[+1-855 618 7522]* have never used before. After updating your password, log out of all active sessions through your security settings. This forces the hacker’s device to be removed *[+1-855 618 7522]* from your account. Then, enable two-factor authentication (2FA) to add an extra layer of protection. If you cannot log in because *[+1-855 618 7522]* the hacker changed your password, email, or phone number, go to Facebook’s account recovery page and select the “Forgot password?” or *[+1-855 618 7522]* “My account is compromised” option. Follow the prompts to verify your identity. Facebook may send a recovery link to your original email or ask you *[+1-855 618 7522]* to confirm your identity through security codes or photo ID verification. The sooner you start this process, the better *[+1-855 618 7522]* your chances of recovery. Next, check your email *[+1-855 618 7522]* account. Hackers often target your email first because it controls password resets. Change your email password immediately *[+1-855 618 7522]* and enable two-factor authentication there as well. If your email is compromised, it will be much harder to secure your Facebook account. After regaining access, review your account *[+1-855 618 7522]* carefully. Check your profile information, email address, phone number [1-855-618-7522], and linked accounts to make sure nothing has been changed. Look at your recent login activity to see if there *[+1-855 618 7522]* are unfamiliar devices or locations. Remove any that you do not recognize. Then, review your recent messages *[+1-855 618 7522]* and posts. Hackers commonly send scam messages to friends or post suspicious links. Delete anything fraudulent *[+1-855 618 7522]* and post a status warning your friends not to click on suspicious messages sent from your account. This helps prevent the scam *[+1-855 618 7522]* from spreading. If you have a Facebook business *[+1-855 618 7522]* page or payment methods linked to your account, check for unauthorized ad charges or changes to page roles. Remove *[+1-855 618 7522]* any unknown administrators and contact your bank if you notice suspicious transactions.

It is also wise to scan your *[+1-855 618 7522]* device for malware. Sometimes hackers gain access through malicious links or infected downloads. Run a full security *[+1-855 618 7522]* scan using reputable antivirus software to ensure your computer or phone is clean. Finally, take preventive steps. Update *[+1-855 618 7522]* passwords on other accounts if you reused the same password elsewhere. Use a password manager to create unique *[+1-855 618 7522]* passwords for every site. Be cautious of phishing emails and suspicious links in the future. In summary, if you get hacked on *[+1-855 618 7522]* Facebook, act fast: secure your email, attempt account recovery, change passwords, enable two-factor authentication, *[+1-855 618 7522]* review account activity, warn friends, and scan your devices. Quick action can minimize damage and help restore control of your account.
